

## Little Yellow (*Pyrisitia lisa*)

**Description:** A small yellow butterfly with a thick black margin in males (margin reduced in females). Unlike the other sulphurs, the Little Yellow lacks spots on the wings. Wingspan: 31 to 36 mm.

**Maritime Distribution:** Vagrant.

**Atlas records to date:** None.

**Provincial Ranks:** NB: SNA. NS: SNA. PEI: -.

**Flight Period:** Mid June to September.

**Host Plant:** A variety of legumes (Fabaceae).

**Notes:** This resident of the southeastern United States migrates north annually, in some years reaching southern Canada. There are four Nova Scotia and one New Brunswick records.
